Domain: Enterprise Sales Operations & Pricing Governance

Architecture: LangGraph StateGraph, LangChain Core, TF-IDF RAG, SQLite Checkpointer

Verification: 72/72 Passing Automated Pytest Test Scenarios (Python 3.10+)

Workflow Pipeline: Request -> Ask -> Retrieve -> Grade -> Tools -> Route -> Recommend

1. EXECUTIVE SUMMARY & OBJECTIVES

In commercial enterprise sales, quarterly performance reviews frequently encounter reactive discounting and unsupported causal claims. The Sales Performance Advisory Agent enforces strict metric literacy across Target Achievement, MoM Growth, and Gross Margin, verifies policies from corporate Playbooks (PDF, DOCX, TXT), and prevents margin-destroying discounts while addressing root causes (Low Revenue vs Low Margin vs High Returns).

2. EXECUTIVE DASHBOARD & USER INTERFACE

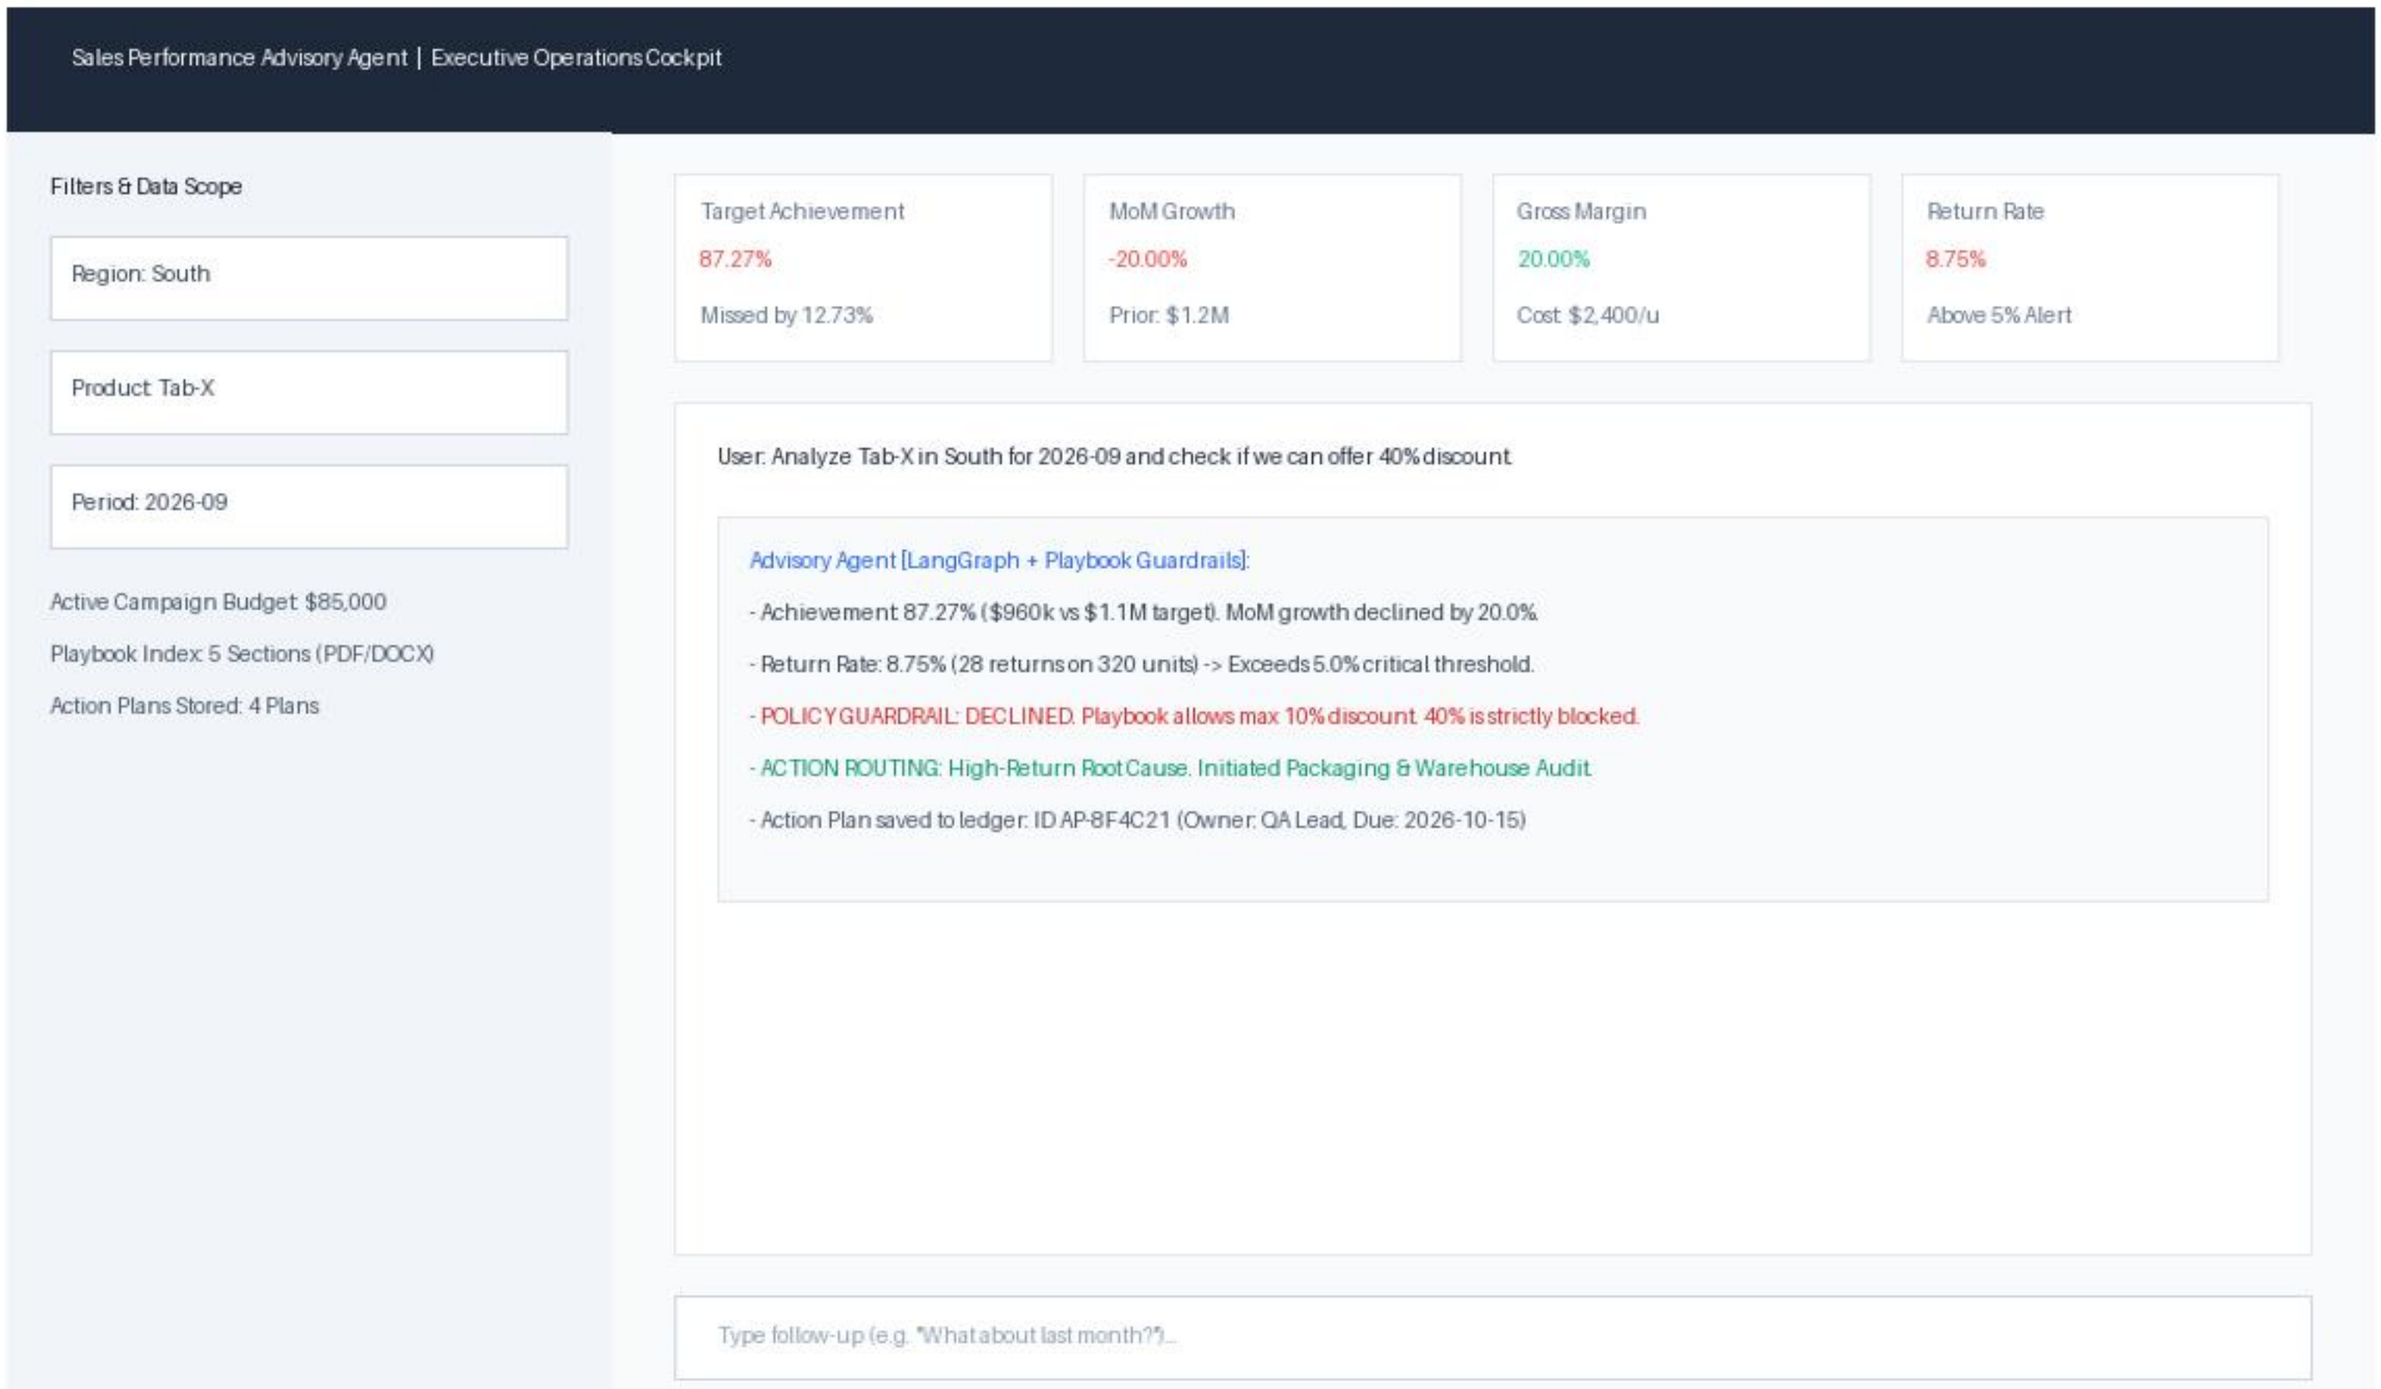

Figure 1: Streamlit Executive Operations Cockpit with Real-Time KPIs & Guardrail Audit Feed

3. CORE CAPABILITIES:

- Deterministic Math Engine: Safe division (target=0 or prior_sales=0 handled without exceptions).
- Multi-Format RAG Retrieval: Parses PDF, DOCX, and TXT playbooks with TF-IDF cosine similarity.
- Bounded Query Rewriting: Up to 2 retries to match policies accurately before graceful fallback.
